PROFESSIONAL SUMMARY

Electronics and Communication Engineering student (CGPA: 7.07/10) at Kamaraj College of Engineering and Technology with hands-on experience in PLC automation, renewable energy systems, and networking fundamentals. Certified by IBM and Cisco in Python programming and cybersecurity. Seeking an entry-level role in networking, cybersecurity, or embedded systems to apply technical and analytical skills.

EDUCATION

B.E. Electronics and Communication Engineering

Expected: May 2027

Kamaraj College of Engineering and Technology, Virudhunagar | CGPA: 7.07 / 10

TECHNICAL SKILLS

Programming Languages: Python (Basic to Intermediate)

Core Subjects: Digital Electronics, Communication Systems, Signals & Systems

Tools & Software: MATLAB, Cisco Packet Tracer, PLC Programming, Figma

Domains: Networking Fundamentals, Cybersecurity Basics, Embedded Systems, UI/UX Design, IoT

Soft Skills: Communication, Teamwork, Adaptability, Time Management

CERTIFICATIONS

Python for Data Science (PY0101EN) – IBM Cognitive Class

2024

Network Technician Career Path – Cisco

2024

Junior Cybersecurity Analyst – Cisco

2024

MATLAB Onramp Training Certification – MathWorks / MATLAB

2024

INTERNSHIP EXPERIENCE

Technical Intern | YBI Foundation

2024 (1 Month)

- Executed real-world technical tasks aligned with industry workflows, strengthening problem-solving and project execution skills.
- Gained hands-on exposure to professional best practices, documentation, and team collaboration.

PROJECTS

Smart Dustbin Using IoT

2024

- Designed and built an IoT-enabled smart dustbin that automatically opens the lid using an ultrasonic sensor and monitors fill level in real time.
- Integrated NodeMCU (ESP8266) with a servo motor to trigger lid operation and transmitted fill-level data to a cloud dashboard for remote monitoring.
- Reduced manual waste-checking effort by enabling automated alerts when the bin reaches capacity, improving hygiene and efficiency.
- Technologies: IoT, NodeMCU (ESP8266), Ultrasonic Sensor, Arduino IDE, Cloud Dashboard

PLC-Based Batch Process Automation System

2024

- Designed and implemented a PLC-controlled automation system to manage batch processing operations, replacing manual intervention with programmable logic.
- Improved overall process efficiency by optimising cycle times and reducing human error through structured ladder logic programming.
- Technologies: PLC Programming, Ladder Logic, Industrial Automation

Solar-Powered Battery Monitoring System for Electric Vehicles

2024

- Developed a real-time battery health monitoring system integrating solar energy input for sustainable power utilisation in EV applications.
- Implemented sensor-based data acquisition to track voltage, current, and state-of-charge parameters, enhancing energy efficiency.
- Technologies: Embedded Systems, Sensor Integration, Renewable Energy, MATLAB
